Description:

A nurse got a task to setup a ventilator machine on a patient, but she has forgotten a couple of steps. To check the information, she used to go to a different room, on a desktop device. New she can use a “Zenya” app to check the information without leaving the patient or changing the device.

Use Case Name:	Checking how to setup a ventilator
Goal:	To check (using Zenya) how to setup a ventilator machine on a patient
Actor:	Nurse
Device:	Smartphone

Precondition: Actor’s Zenya application is open.

Main success Scenario (MSS):

1. Actor scans a QR code which is shown on ventilator machine
2. Application asks to select which way to display information
3. Actor selects “Text/Image” method
4. Application shows all the steps needed to perform a task

Extensions:

1a, 3a. Actor wishes to cancel operation

1. Use case ends

1b. QR code is not readable

1. Appropriate message is shown
2. Actor inputs a text code written under the QR code
3. Use case continues in step 2 of MMS

3b. Actor wished to use an “AR” method

1. The application shows all the steps needed to perform a task in a phone AR environment.

3c. Actor wishes to use a “Voice” method

1. The application start playing a recording of all the steps needed to perform a task

4a. The selected method is unavailable/undeveloped

1. Appropriate message is shown
2. Use case continues in step 2 of MMS

Description:

The doctor needs to make an operation which he hasn’t done in a long time. He knows the procedure pretty well but still would like to have all steps of the procedure near him. In the past he had to look away from the operation to check the procedure on tablet or a desktop device, but this

time he decides to try out Zenya application with AR glasses. With the help of AR, now he can see all the steps of the procedure and patient information without even losing focus from the patient,

Use Case Name:	To show procedure through AR glasses
Goal:	To see the steps of the procedure clearly without losing focus
Actor:	Doctor
Device:	AR glasses

Precondition: Actor has previously made a connection between his smartphone and AR glasses. His Zenya application is open.

Main success Scenario (MSS):

1. Actor searches and selects a specific procedure document
2. Application asks to select which way to display information
3. Actor selects “AR glasses” method
4. Application shows all the steps of the procedure through AR glasses

Extensions:

1a, 3a. Actor wishes to cancel operation

1. Use case ends

4a. The procedure is not compatible with “AR glasses” method

1. Appropriate message is shown
2. Use case ends

4b. AR glasses are low on battery

1. Actor trade his AR glasses with the ones who has a full charge
2. Actor makes all necessary connections with his smartphone and AR glasses
3. Use case continues in step 1
